Education

Arizona State University — *Tempe, AZ*
Ph.D., Data Science, Analytics and Engineering — *Jan 2022 – Jan 2027*

- **Advisor:** Prof. Yalin Wang. **Co-Advisor:** Prof. Zhong-Lin Lu (**NYU**). **GPA:** 4.0/4.0

University of California San Diego — *La Jolla, CA*
M.S., Machine Learning and Data Science — *Sep 2019 – Mar 2021*

- **Advisor:** Prof. Duygu Kuzum. **GPA:** 3.9/4.0

Yale University — *New Haven, CT*
Exchange Scholar, Department of Cell Biology — *Feb 2018 – Jun 2018*

Fudan University — *Shanghai, China*
B.S., Physics — *Sep 2014 – Jun 2019*

Game Projects

Individual Indie RPG Development — *Dec 2023 – Present*

- Designed tabletop-RPG style statistic systems, including turn-based combat and multi-class character builds.
- Trained personalized diffusion models for pixel-style character art, 2D dungeon map, and VFX design.
- Constructed and coded the software using Godot.

Tabletop-RPG Design and Localization — *Jun 2022 – Nov 2023*

- Main contributor to the Chinese localization of a JRPG style rule "Fabula Ultima" from Italian.
- Helped the localized version towards crowdfunding, reached highest history in Chinese TRPGs (¥2.6M).

Research Projects

Optimization and ViT Innovation for Multimodal LLMs — *ASU, AZ* — *Aug 2025 – Present*

- Developed a Large Language Diffusion Model for medical VQA, replacing autoregressive decoding with masked diffusion to enhance report generation and logical consistency.
- Engineered a training-free pruning framework using Optimal Transport and Wasserstein distance to mitigate ViT token redundancy, significantly reducing inference FLOPs without accuracy loss.

Transformer-based Octree MAE Pipeline for Tetrahedral and Triangular 3D Meshes — *ASU, AZ* — *Jul 2024 – Present*

- Designed an MAE with octree-guided transformer attention for large tetrahedral/triangular 3D meshes.
- Use simplex-aware octree partitioning and positional encoding to enable scalable learning across variable mesh resolutions/sizes.
- Unified multi-source mesh information besides coordinates (geometry/attributes) within the unsupervised MAE framework, supporting both medical brain MRI mesh and general 3D mesh tasks.

3T to 7T fMRI Time Series Signal Enhancement and Denoising Using GAN and Bridge-based Diffusion Models — *ASU, AZ* — *Oct 2023 – Present*

- Built time series fMRI signal processing pipeline upon 3D/2D brain surface meshes.
- Developed GAN & Schrödinger bridge Diffusion frameworks to enhance low-quality fMRI on brain mesh.
- Achieved downstream improvements on low-quality (3T) fMRI on tasks including pRF modeling, visual image reconstruction, demonstrating fidelity comparable to native high-quality (7T).

Geometry fMRI Analysis and Processing for Human Vision — *ASU, AZ* — *Jan 2022 – Present*

- Advanced geometry processing including conformal mapping, topology correction, and optimal transport for fMRI signal on 3D/2D brain surface meshes.

- Streamlined ML pipelines for multiple 3T/7T fMRI datasets, including DNNs/transformers/diffusions.
- Leveraged geometry & ML methods to study visual processing through fMRI (pRF, cortical magnification...)

BCI Data Analysis for Mice Hippocampus CA1 Implant Planar Neuroelectrode Recordings *UCSD, CA* *Feb 2020 – Mar 2021*

- Analysis of hippocampus CA1 recordings from transparent graphene implants on mice.
- Decomposed LFP envelopes via mathematical methods; trained CNNs to detect signal ripples by spatiotemporal patterns.
- Performed multimodal analyses linking ripple patterns, two-photon imaging, and mice behavior.

Work Experience

Machine Learning Researcher Intern *Shanghai, China*
Netease Interactive Entertainment *May 2021 – Aug 2021*

- Researched and implemented a chatbot system utilizing GPT-2 for Mandarin RPG narration.
- Investigated LLM-based narration using local finetuning and prompt engineering with knowledge graphs.
- Delivered a functional Unity-based demo with Dockerized deployment.

Machine Learning Engineer Intern *Shanghai, China*
Cozy-Cat Technology Co. Ltd *Aug 2021 – Dec 2021*

- Calibrated and optimized a multi-camera markerless motion detection system; analyzed data and recordings.
- Modified 2021 SOTA models (OpenPose, MoveNet), developed a 3D pose estimation network leveraging point-cloud and multi-view recordings.
- Maintained the detection framework and Docker interface for real-time latency with Unity apps.
